Tired of typing with the ugly onscreen keyboard while your nice desktop/laptop is around? Then install Remote Keyboard!

1. Installation
   Just download the package from
   https://play.google.com/store/apps/details?id=de.onyxbits.remotekeyboard
2. Configuration
   Once installed, when you launch it, instructions will guide you to set it as an input method
3. Usage
   From a client (any system that have a telnet client!) just do

   ```
   telnet IP PORT
   ```

   A window appears with a list of usable shortcuts. You are in!

Fix Me! Known problem, once you disconnect (using Ctrl+D) you cannot reconnect directly you have to select another input and switch back to it

Please set a password!!!
