Nice stuff to do with diff commands:

Compare output of 2 commands

Basic

```
diff <(command 1) <(command 2)
```

Side by side

```
diff -y <(command 1) <(command 2)
```

You can control the width of the columns

```
diff -y --width= XXX<(command 1) <(command 2)
```

Where XXX is the number of columns
