INTRO

I dislike UEFI, but it clearly boots faster OSes that uses it... One of the crap left behind are entries in the “BIOS” if you install different distributions

Cleaning

Efibootmgr

As root or sudoer

```
efibootmgr
```

lists all entries Remove one with

```
 efibootmgr -b 0010 -B
```

where 0010 is one of the entries listed

```
Boot0010* : Linux stuff
```
