1. Add a string (comment for example) at the beginning of several lines:
    - Use Ctrl+V to select the first column of text in the lines you want to comment. (using up/down arrows to highlight the portion needed)
    - Then hit Shift+i and type the text you want to insert.
    - Then hit Esc, wait 1 second and the inserted text will appear on every line.
2. Add a string at the end:

```
:%s/$/string you want to add at the end/g
```
