After years of FVWM I'm trying awesome. Not that I'm not satisfied with FVWM but more a check on other highly configurable VM (and light!)

First step

Install Awesome! (I also installed dex rlwrap vicious)
Copy the /etc/xdg/awesome/ folder to ~/.config/awesome/

```
mkdir -p ~/.config/awesome/
cp -r /etc/xdg/awesome/* ~/.config/awesome/.
```

Change your xinitrc/*dm config to boot on awesome

Configuration

Can/Should be done on Xephyr

```
Xephyr :1 -ac -br -noreset -screen 1152x720 &
DISPLAY=:1.0 awesome -c ~/.config/awesome/rc.lua
```

Follow the basic wiki My First Awesome adapting it to your needs
